Projects

KudosCast

KudosCast is used for Social Media analytics, where users can create campaign and share campaign on social media. User will send a discount code to the admin registered number which is shared with him manually at the time of walk-in. Admin will send website URL with campaign details to the respective number. Customers will click on the link and interface to share the video from the gallery or a new video can be created. After video is uploaded on server, the video is uploaded to admin YouTube channel and returns a YouTube video link to user and user will be given the option to share the URL on social media sites like (Facebook and Twitter). There are 3 type of campaign on the website Video, Image and Marketing.

Technology Used: Laravel, React JS, PHP, HTML, Bootstrap, Ajax, Java Script

BeMiGuest

BeMiGuest is a platform for those who want to rent their property, like Rooms, Living Space, Parking Space, have some service to offer from home and lot more. The application will be both for the Property owners as well as Customers. Customers here will be the ones who will place a request to book a property on rent for some time. There's a backend Admin interface where Admin can Manage both Property Owners and Customers. In case of any Dispute between the Property Owner and Customer, the admin will review the case and sort it out. The payment from Admin to Property

Owner will be done automatically. Quick Book Integration to manage the accounting and payments. The system generates Form 1099 dynamically to send to the Property Owners.

Technology Used: Android- kotlin, iOS- Swift.

Chicology

Chicology is a custom Framework build in CI having E commerce which deals bamboo chopsticks and calendars. Careshop

The project aims to create Magento 2 store and a community interface for unique products. The project will be built on Magento 2 and Laravel. There will be regular Magento Ecommerce website where the admin will list their products. There will be another section called Community where the users will put their own products that they feel should be sold. The admin will approve these products and then these products will be available for back order. These products once approved by the admin will then go into manufacturing. The project will be based for Switzerland location. The website will be a multilingual website. The website will accept currencies in Euro, USD to begin with. The website will have rewards and ratings that the customer can give to the products. The overall idea of the project is to sell normal products along with bespoke products that the users can create themselves.

Technology Used: Magento 2

Healthy Foods
